● Nanatsuishi Koya (hut)

At 2,017 meters, Mt. Kumotori's summit is the highest point in Tokyo, one of the biggest metropolises in the world. One interpretation of its name is "cloud catcher"; a similarly named and similarly misty spot exists on the Kumano Kodo pilgrimage route on Kii Peninsula to the distant southwest. From Mt. Kumotori, you can see sacred Mt. Fuji rising above a sea of lower peaks, a view afforded only to those to reach the summit.
